

# HOMEOWNER INFORMATION SHEET

# ENERGUIDE

Your EnerGuide\* rating and this report are based on data collected and, where necessary, presumed from your evaluation. Rating calculations are made using standard operating conditions.

House #1

**Rating: 146** gigajoules per year (GJ/year)

Heated floor area: 156.4 m<sup>2</sup> (1683.5 ft<sup>2</sup>)

Rated energy intensity: 0.93 GJ/m<sup>2</sup>/year

Evaluated by: Dave Turnbull

Quality assured by: Enerspec Consulting

File number: 9A02D00112

Data collected: March 19, 2019

Year built: 1983

## HOW YOUR RATING IS CALCULATED:

- I. Rated annual energy consumption 146 GJ/year  
 II. Minus renewable energy contribution - 0 GJ/year  
 Equals your **EnerGuide rating** = 146 GJ/year

I. Your rated annual energy consumption is the total amount of energy your house would use in a year based on the EnerGuide Rating System standard operating conditions. For your house, this includes 20.54 GJ of passive solar gain.

| Energy Sources | Rated Consumption (GJ/year) | Equivalent Units (per year) | Greenhouse Gas Emissions (tonnes/year) |
|----------------|-----------------------------|-----------------------------|----------------------------------------|
| Natural gas    | 119                         | 3193m <sup>3</sup>          | 6.2                                    |
| Electricity    | 27                          | 7520kWh                     | 7.0                                    |
| Total          | 146                         |                             | 13.2                                   |

II. On-site renewable power generation systems can offset some or even all of your home's energy consumption. Renewable energy contributions are factored differently for your rating and your greenhouse gas emissions calculations.<sup>1</sup>

| On-Site Renewable Energy | Estimated Contribution (GJ/year) | Equivalent Units (per year) | Offset Greenhouse Gas Emissions (tonnes/year) |
|--------------------------|----------------------------------|-----------------------------|-----------------------------------------------|
| Electricity              | 0                                | 0 kWh                       | 0.0                                           |
| Solar water heating      | 0                                | 0                           | 0.0                                           |
| Total                    | 0                                |                             | 0.0                                           |

## YOUR RATED GREENHOUSE GAS EMISSIONS CALCULATION:

Total greenhouse gas emissions 13.2 tonnes/year  
 Minus emissions offset by on-site renewables - 0.0 tonnes/year  
 Equals your **rated greenhouse gas emissions** = 13.2 tonnes/year

## HOW YOUR RATED ENERGY IS USED:

The chart below represents the breakdown of rated annual energy consumption in your home under standard operating conditions. You can use these figures as a guide to help identify where you can lower home energy costs through proper home maintenance, efficient home operation, energy efficiency renovations or equipment replacement.

## WHERE YOUR HOME LOSES HEAT:

Houses lose heat through their exterior shell, or building envelope. The chart below shows where and how your home loses heat. The quality and upkeep of your home can have a major impact on the amount of energy your heating and cooling systems use annually.

# RENOVATION UPGRADE REPORT

# ENERGUIDE

Year built: 1983

Assessment date:  
March 19, 2019

Evaluated by:  
Dave Turnbull

Quality assured by:  
Energispec Consulting

This report identifies your home's energy savings opportunities by providing you with recommended renovation upgrades. It complements your EnerGuide label and your Homeowner Information Sheet and includes:

- 🏠 Your customized action plan to improve the energy efficiency of your home;
- 🏠 Information on your rating and potential contribution to greenhouse gas (GHG) emission reductions;
- 🏠 Before and after heat loss and energy use estimates;
- 🏠 Important health and safety information; and
- 🏠 Additional energy savings tips.

## YOUR ENERGY EFFICIENCY ROADMAP

Your energy advisor has prioritized your recommended upgrades based on the potential energy savings, the life expectancy of your home components, the interactions between systems, your potential renovation plans and the costs to perform the upgrades.

By implementing all upgrades, you are helping to fight climate change and could **reduce GHG emissions by up to 3.8 tonnes per year.**
